

# AUTOMATIC TRANSPLANTING WITH TTS TRANSPLANTER

**MULTI ROWER**

[www.tts-transplanter.com](http://www.tts-transplanter.com)

## HIGH DENSITY/MULTI ROWER

- Average output up to 4000+ plants per row per hour
- Available for planting 3 till 8 rows per robot
- Multiple robots in one frame possible
- Row spaces from 4 till 24 inch (10 till 60 cm)
- High density up to 25 plants per meter per row
- Automatic ground pressure control
- Plant on flat or raised beds
- One machine operator needed
- Due to the design great visibility on the plant rows

**Forestry tree planting 5-line one robot**

**6-line also available in self-propelled**

- Easy maintenance with a minimum of moving parts
- Various seedling trays fit the tray cassette
- Special design for close row spacings such as salads, head lettuce, onions, herbs, forestry seedlings and flowers/ornamentals.

*All output rating is depending on the kind of seedling trays that are being used.  
Ask TTS for calculation assistance.*
