# HIGH DENSITY / MULTI ROWER

*(Plant several rows between the tractor wheels)*

- \* Average output 4000+ plants per row per hour.
- \* Available for planting 3 till 8 rows per robot.
- \* Multiple robots in one frame possible.
- \* Row spaces from 4 till 24 inch (10 till 60 cm).
- \* High density up to 25 plants per meter per row.
- \* Automatic ground pressure control.
- \* Plant on flat or raised beds.
- \* One machine operator needed.
- \* Due to the design great visibility on the plant rows.

Forestry tree planting 5-line one robot

6-line also available in self-propelled

- \* Easy maintenance with a minimum of moving parts.
- \* Various seedling trays fit the tray cassette.
- \* Special design for close row spacing such as salads, heas lettuce, onions, herbs, forestry seedlings and flowers/ornamentals.

*All output rating is depending on the kind of seeding trays that are being used.  
Ask TTS for calculation assistance.*
